

The scatter plot displays 100 data points categorized into six groups, each represented by a unique color. The points are distributed across a 2D space, with a horizontal red line separating the top and bottom halves of the plot. The categories and their approximate distributions are as follows:

- Blue:** Approximately 15 points, clustered in the lower-left quadrant.
- Orange:** Approximately 15 points, clustered in the lower-middle quadrant.
- Green:** Approximately 15 points, clustered in the upper-middle quadrant.
- Red:** Approximately 15 points, clustered in the lower-right quadrant.
- Purple:** Approximately 15 points, clustered in the upper-right quadrant.
- Brown:** Approximately 15 points, clustered in the lower-right quadrant, overlapping with the red points.
